

Climate Health Intelligence System (CHIS)

Terms of Service

Generated for download from the CHIS public policy pages.

1. Overview

The Climate Health Intelligence System (CHIS) is a climate-informed operational platform designed to support public health monitoring, preparedness, and response.

By accessing or using this system, you acknowledge that you have read, understood, and agree to follow these terms.

2. Authorized Use

Access to CHIS is limited to approved users working in recognized operational roles, including CHVs and healthcare workers, county health officials, public health officers, and authorized partners.

3. User Responsibilities

Use the platform only for approved public health monitoring, coordination, research, and operational response work.

Protect your credentials, maintain device security, and never share access with unauthorized users.

4. System Functionality

CHIS may provide risk predictions, automated alerts, and decision-support views to help operators respond to climate-health signals.

5. Important Disclaimer

CHIS provides operational decision support informed by climate and risk signals. It does not replace professional judgment, official public health procedures, or verified field assessment.

6. System Availability

We work to keep the platform available and reliable, but uptime may be affected by maintenance, connectivity, or third-party service interruptions.

7. Limitation of Liability

CHIS is provided to support public health operations. Users remain responsible for applying appropriate judgment and validating actions in real operational settings.

8. Administration and Updates

Access can be reviewed, limited, or removed when policy or operational requirements change. These terms may be updated periodically, and material changes will be reflected on the current page.
